Smart Family Health and Expense Management System

Problem Statement:

- Many families struggle to manage monthly bills, household expenses, and healthcare records due to busy schedules and the lack of a centralized digital system. Missing bill due dates, forgetting medicine schedules, and maintaining scattered financial and medical records often lead to late payment penalties, poor budgeting, and unnecessary stress. Therefore, there is a need for a smart and user-friendly system that helps families efficiently manage their financial and healthcare activities in one secure platform.

Abstract:

- The Smart Family Health and Expense Management System is a web-based application for managing household bills, expenses, health records, and medicine reminders.
- It helps solve problems such as missed bill payments, poor expense tracking, and unorganized medical records.
- Users can record bills, monitor expenses, store health information, and receive timely reminders.
- The system promotes better budgeting, improved healthcare management, and an organized family lifestyle.

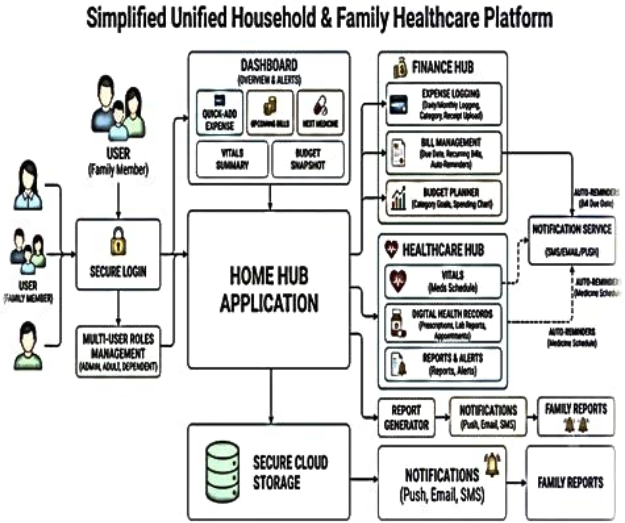

Objectives:

- To develop a centralized digital platform that helps families manage household bills, monthly expenses, and healthcare records efficiently.
- To provide timely reminders for bill due dates and medicine schedules, reducing late payments and improving health management.
- To promote better financial planning and organized family healthcare through secure record management and expense tracking.

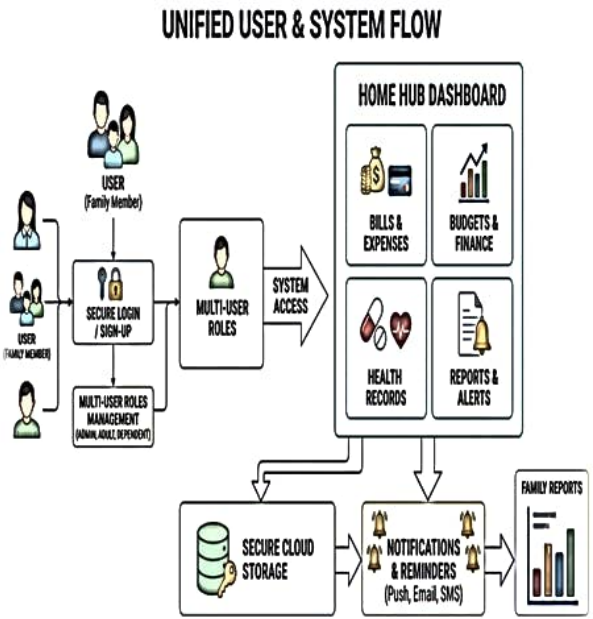

Proposed System:

- Develop a centralized web-based application to manage household bills, expenses, and family healthcare information in one secure platform.
- Provide automatic reminders for bill due dates and medicine schedules to help users avoid late payments and missed medications.
- Enable users to record and monitor daily and monthly expenses, helping families plan their budgets effectively.
- Maintain digital health records, generate expense reports, and provide an easy-to-use dashboard for better financial and healthcare management.

System Workflow:

- **User Registration/Login** – The user creates an account or logs in to access the system.
- **Access Dashboard** – After login, the dashboard displays bills, expenses, health records, reminders, and notifications.
- **Manage Information** – The user adds or updates household bills, daily expenses, family member details, and health records.
- **Store Data** – All the entered information is securely stored in the database.
- **Reminder Generation** – The system automatically checks bill due dates and medicine schedules and generates reminders.
- **Notifications & Reports** – The user receives timely notifications, and the dashboard displays updated reports, charts, and expense summaries for better decision-making.

Technology Used:

- **HTML**-Creates the structure of the web pages.
- **CSS**-Styles the website and improves its appearance.
- **Bootstrap**-Makes the website responsive and provides ready-made UI components.
- **JavaScript**-Implements the backend logic and application functionality.
- **My SQL**-Stores user data, bills, expenses, and health records.
- **Visual studio code(VS code)**-Source code editor used for development.
- **Google Chrome**-Used for testing and running the web application

Key features:

Expense & Bill Management – Track household expenses and manage bill payments with reminders.

Health Record Management – Store family medical records and medicine schedules securely.

Dashboard & Reports – View expense summaries, notifications, and reports in one place.

Future Scope:

Mobile Application – Develop an Android/iOS app for easy access anytime, anywhere.

Cloud Integration – Store data securely on the cloud for backup and multi-device access.

AI-Based Insights – Provide smart expense analysis, budget suggestions, and health recommendations.

Thank You
